CARL SALBACH

DAHLIAS
GLADIOLI

6088 Hillegass Avenue
OAKLAND
CALIFORNIA, U. S. A.

“**W**HO hath ears to hear let him hear.” We try always to keep an open mind and are always listening to hear of new flowers to grow and always looking to find better ways of growing them. This past year we have acquired many new varieties of other originators and have produced a fine lot of our own. We have planted the good seeds in good ground and the increase has been like that of the sower in the parable.

Our office work has been cut down to the least possible minimum consistent with keeping accurate records but we have spared no time or money on growing and caring for our stock. We have as our reward as clean and healthy a lot of big plump bulbs as were ever brought into a packing shed and we are looking forward with much pleasure to filling your orders with them.

We thank you again for your generous patronage and your many commendations.

Very truly yours,

CARL SALBACH

Gladioli

The word gladiolus comes from the Latin gladius, meaning little sword and is used because of the resemblance of the gladiolus leaves to a sword. The first mention we have of gladioli was in the days of the Romans. They were first found in the Mediterranean region, then further north in Europe, in England and in South Africa. Such wonderful improvements have been made by the European and American hybridizers that we can scarcely recognize these early specimens as the forerunners of our present glorious gladioli.

How to Grow Gladioli

The bulbs should be planted in the spring, after all danger of frost is over. Plant from four to six inches deep, according to the lightness of the soil and the size of the bulbs. In a cool climate they thrive best in a good sunny place. Where the summers are extremely warm, a partially shaded place is preferable.

We do not advocate the use of dressing too liberally. A light application of any well decayed manure or good commercial fertilizer applied on the top of the ground after the plants are several inches high will aid in producing larger blooms. Never apply fertilizer at the time of planting. The ground should be kept moist (not wet) until the flower spikes begin to appear, then water freely. The spikes can be cut as soon as the first bud begins to open. Four or five of the lower leaves should be left to help mature the new bulb.

The bulbs should be dug as soon as the leaves turn yellow or as soon as they are killed by frost. They should be lifted tops and all and allowed to cure, preferably out of doors. If in a warm climate they should be shaded during the heat of the day and should at all times be protected from frost. The usual time for curing is from four to six weeks. When thoroughly dry the tops should be cut off close to the bulbs and the old dried corms removed from the bottom of these new bulbs. Store in shallow trays in a cool dry place protected from frost.

For General Information, see page 2. Gladiolus orders can be filled in the fall or spring.

Rose Ash (Metzner). A gladiolus that offers a decidedly new color. Mr. Chas. E. F. Gersdorff, who is recognized as authority on gladioli, says: "It is easily of XXXX quality. It is fine in its pastel coloring, fine in the garden and as a cut flower. It has great decorative possibilities." We grew several acres of this gladiolus in one block and it was indeed an inspiring sight to view this bed of tall stately spikes of pastel blooms all in flower at one time. Primulinus Hybrids

These beautiful flowers are a cross between the small Primulinus species which is found growing wild near Victoria Falls, South Africa, and the large gladioli. The result is a new variety known as Primulinus Hybrids. The blooms are smaller than those of the gladioli, are slightly hooded, and are poised like butterflies on long, graceful stems. They come in the beautiful nasturtium shades, with a few exquisite pink varieties. Because of the size and the graceful pliant stems, they are especially lovely in baskets and for table decorations.

Irises

This season we have added very materially to the fine collection of new and standard varieties of bearded irises. We have taken over all the marketable stock of the Campos Altos Iris Gardens from Mr. and Mrs. Sydney B. Mitchell. This includes all the famous Mohr seedlings that have been grown in large enough quantities to catalog and many other American, English and French novelties. Mr. and Mrs. Mitchell will devote their time exclusively to the production of new varieties.

It is our aim to give the same prompt and efficient service to our iris customers that we have given to our dahlia and gladiolus customers in the past and also the same splendid service that Mr. and Mrs. Mitchell have always given their patrons.

Our iris catalog will be ready for mailing in April. If you are interested send us your name and address **now**. Your copy will be mailed at the proper time.

June 1st to September 30th is shipping time for irises. Transplanting later than September allows no assurance of blooms for the following Spring.
